Art Unit: 1656

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I-V. Claims 1-5, 10, and 11, drawn to nucleic acid encoding APS reductase of SEQ ID NO: 2, 4, 6, 8, and 10, respectively, vector and a host cell, classified in class 435, subclass 410.
- VI-X. Claim 6, drawn to APS reductase of SEQ ID NO: 2, 4, 6, 8, and 10, respectively, vector and a host cell, classified in class 435, subclass 189.
- XI-XV. Claim 7, drawn to method of altering the level of expression of sulfate assimilation protein, classified in class 435, subclass 440.
- XVI-XX. Claim 8 and 9, drawn to a method of obtaining nucleic acid fragment encoding sulfate assimilation protein, classified in class 435, subclass 6.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-X are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are independent chemical entities having different structure and function.

Inventions XI-XX are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are independent methods having different steps, using different reagents, and produce different products.

Inventions I-V and XI-XX are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the nucleic acid of inventions I-VI can be used in a method to make the polypeptides of inventions VI-X.

Inventions VI-X and the methods of inventions XI-XX are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the polypeptides of inventions VI-X are not used in any of the methods of inventions XI-XX.

Art Unit: 1656

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
